

Ryan Owen

Graduate Process Engineer

Class of 2020 Alumni

I loved my time at Carmel. My subjects were very well taught and the college experience paved the way perfectly to progress to university and live the life I currently lead.

"I have recently graduated from the University of Manchester with MEng (Hons) Chemical Engineering and in September secured a graduate scheme with Costain Group PLC in Manchester as a Graduate Process Engineer for energy and nuclear.

This graduate scheme will send me well on my way to becoming a Chartered Engineer with IChemE. Prior to securing my job I completed a membrane based dissertation in the National Graphene Institute and continued this research over the summer of 2024 with an internship."
